President / Senior Software Engineer

Cave Logic Studios, Ltd., San Francisco, CA, 1994-1998

- Met with publishers and other clients; negotiated game programming, artwork, and other support contracts
- Generated additional revenue streams by licensing World Foundry tools and libraries
- Trained artists and level designers
- Created sample levels using algorithmic generation techniques for promotional material for Channel 3D, using an updated version of World Foundry for stereoscopic glasses
- World Foundry architecture and development, one of the two main programmers, scripting language compiler and runtime byte-code interpreter
- World Foundry enabled Cyclone Studios [3DO], PF.Magic, Hasbro, and Virgin Games to provide a rapid prototyping environment for game designers, artists, and level designers
- Development of PlugIns for 3DS R4, designed and coded other tools required for conversion of assets from commercial packages to internal runtime game formats
- Ported Ballz 3D: The Director's Cut from SNES to 3DO
- Coordinated all programming and art production, management and scheduling, interfacing to publisher for Ballz 3D [SNES] project; one of the two programmers

Senior Software Engineer / Team Lead

Alexandria [Oddworld Inhabitants], Los Osos, CA, 1993

- Responsible for development of OO core runtime library code for game engine used in several titles on both the Genesis and SNES
- Art production pipeline specification; developed many tools and utilities to automate artist and production build tasks

Software Engineer / Project Manager

Developer Resources, Mountain View, CA, 1992-1994

- Coded The Great Waldo Search, trained new artists for tile-based assets production
- Coded Game Genie OO firmware and supporting encryptions tools
- SNES Art Downloader [PC connected to a custom SNES cartridge with parallel port; artist hits "PrintScrn" button and image is transferred to SNES and displayed on the TV]
- SNES Development System tools, including OO multiscreen windowed debugger, assembler, profiler [under DOS 4/GW 32-bit DOS Extender]

Software Engineer

Equilibrium, San Rafael, CA, 1991-1992

- Developed production tools for GameBoy development
- Provided training to artists

Software Engineer

Brian A. Rice, Inc., Darien, IL, 1990-1991

- Ported Trump Castle II from MS-DOS to Amiga
- Developed Penthouse Jigsaw
- OO Assembly Language: Code Architecture and programming on Super Soccer
- Support programming for Shanghai II and Mission to Mars

Software Engineer / Assistant External Producer

Polarware [Merit Software], Batavia, IL, 1988-1990

- Enabled Polarware to increase sales and profits by providing Amiga versions of their product lineup
- Ported and enhanced Electric Crayon series for the Amiga
- Implemented Transylvania III on Amiga and IBM PC
External assistant producer, interfaced with outside developers
- Brian A. Rice, Inc., for new Electric Crayon series titles
- Coordinated development of Transylvania III for the Apple II GS
